Introduction

Hydraulic systems are widely using in various industries thus sealing element have a decisive influence on the design, function and service life of hydraulic cylinders and systems.

There are two main types of hydraulic seals in the system:

- **Static Seals:** A Static hydraulic seal is in a groove and sees no movement and only sealing within its confined space. Eg. Cap seals and Gaskets.
- **Dynamic seals:** Dynamic Rod seals are expose to movement on its inner diameter along with the shaft or rod of a cylinder while Piston seal is expose to movement on its outer diameter along with the bore of a hydraulic cylinder.

To design hydraulic rod and piston sealing systems, there is a need to focus on the principles of dynamic seal interaction and tribology to ensure long service life, proper seal function, minimum wear, low friction, and smooth operation. Hydraulic seals are made from variety of materials such as...

- Polyurethane
- Rubber
- PTFE

The materials used will depend on the specific operating conditions. The most important consideration for tribal qualities of a dynamic sealing system are:

- Pressure
- Temperature
- Speed
- Media
- Surface Roughness
- Fluid Media
- System Tolerances

FACTORS INFLUENCING SEALING ELEMENT

System pressure, sliding speed, temperature, media, surface roughness and system tolerances are the important parameters taken in to consideration while choosing the type of the sealing element.

Pressure

The pressure is an important factor influencing the sealing system because the system working force is obtain by the cylinder bore diameter and the system pressure. Maxspare offers sealing solutions up to 700 bar (can recommend up to 2000 bar) operating pressure of the sealing elements.

Temperature

The operating temperature of the sealing media affects the choice of sealing materials. The ideal working temperature for the sealing element and system is 50°C, but the application temperature usually goes up to 100°C. In dynamic applications, sealing elements have direct contact with the sliding surface and this is the reason it is affected by the heat generated by friction forces. The system temperature should be less than the working temperature of the sealing element. At low temperatures, the seal material will stiffen and may become brittle although it will relax as the temperature rises. With high temperatures, the seal material will become more elastic and lose compression set. The higher temperatures will also reduce the viscosity of the oil resulting in accelerated wear of

the seals. For PTFE seals the effect of temperature will be based on the seal's energiser. Refer sealing materials on page No. 10 to understand the maximum operating temperatures of each sealing elements.

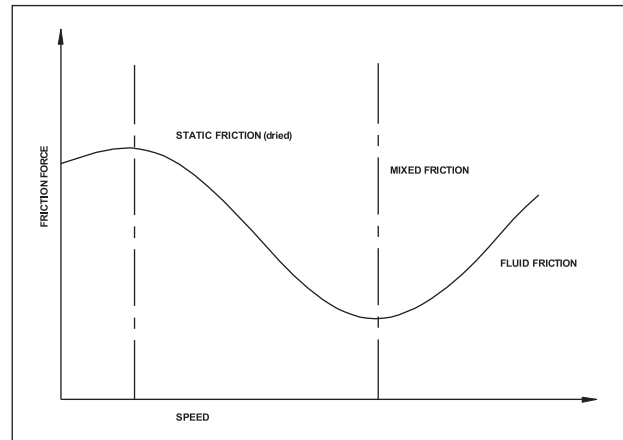

Fig. 1 : Friction force Vs Speed

Speed

Seals ride on lubricating film between the seal lip and moving surface. Friction will depend upon the thickness of this lubricating film, which will be squeezed in to minimum thickness when there is no movement, and creates friction. There are 3 different frictional force occur because of oil film:

1. Static (Dry friction)
2. Mixed friction (Dry and Media friction)
3. Fluid friction (there is no dry contact)

When dynamic movement starts, a high friction force arises which leads to mixed friction, it results in the immediate decrease in frictional force because more lubricating fluid is then drawn between the seal and moving surface. A point is reached with increasing speed that the frictional force increases again and the seal will begin to wear. Figure 3 shows an increase in the friction force with speed increasing and oil film thickness decreasing. That is why at high sliding speeds the sealing elements should be chosen from PTFE material.

Media

The minimum and maximum operating temperature of the sealing elements do change with the media they are being used in. Sealing elements can be used in mineral oils, hydraulic, atmosphere, water and different type of media are the most common media used with the sealing elements.

The viscosity of the media is one of the reasons for wear in the sealing elements. Pressure and temperature change the viscosity of the media. The viscosity of the media increases with pressure. Increasing temperature reduces the viscosity of the media depends on the type of media. When selecting a media type, the effectiveness of operating pressure and temperature on viscosity should be checked.

Surface Roughness

Surface roughness is an important parameter for sealing elements to work at desired effectiveness. The functional reliability and service life of a seal very much depend on the quality and surface finish of the mating surface to be sealed.

It should be free from scores, scratches, pores, concentric or spiral machining marks, etc. The aim of all types of surface finish is to provide a surface which causes the minimum wear to the seal.

Parameters for specifying a surface finish are defined by ISO 4287 and ISO 4288. The most common surface roughness parameter specified is Ra (in units μm or $\mu\text{in.}$), i.e. the arithmetic mean deviation of the surface profile.

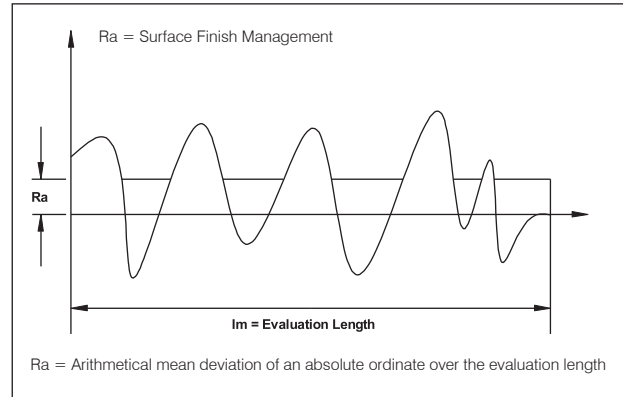

Fig. 2

Recommendations for dynamic sealing surfaces

Piston rods are generally minimum 67 Rockwell hard chrome plated. This gives an excellent tribological surface, provided the rods are produced within the surface range of 0.1 to 0.3 μm Ra, no major problem may ensure, although the optimum surface finish may well depend on the seal material.

Cylinder bore finishes can be more problematic. The recommendations for the cylinder bore surface assume that typical materials and processes are used to machine the bore by either honing or roller burnishing to achieve the specified diameter and finish.

Recommendations for static sealing surfaces

Static sealing surfaces must also have a proper surface finish to enable the desired sealing performance. Generally, these are fine tuned and free from chatter marks.

Table 1 : Surface Finish Table

Surface Roughness	Thermoplastics & Rubber materials		PTFE materials	
	Metric (μmRa)	Inch (μinRa)	Metric (μmRa)	Inch (μinRa)
Dynamic Sealing face ϕd	0.1 – 0.4	4 – 14	0.05 – 0.2	2 - 8
Static Sealing face ϕD	1.6 max	63 max	1.6 max	63 max
Static Housing face L	3.2 max	125 max	3.2 max	125 max

System Tolerances

System tolerances are important factors in the life of the sealing elements. Inappropriate dimensions, tolerances, and decentralized hydraulic cylinders lead to rapid wear of the sealing elements, and the system does not provide the required performance. Table 2 shows the general tolerances used in the hydraulic systems.

The sliding surface should be free from Scores, scratches, pores, concentric or spiral machining marks etc. to obtain the required surface roughness values.

The Rods should be made of steel chrome-plated, ground or polished and other parts of the cylinder must be of steel, cast steel, cast iron or special engineering plastics.

Hydraulic fluids

The fluids used in hydraulic systems has many functions:

- Lubricate surfaces in contact and relative speed.
- Clean the system by removing contaminated substances and wear particles to filter the body or settlement areas.
- Power is transmitted by pressure flow acting on the movable part.
- Prevent component corrosion.
- Cool the system by transferring heat from high loads, motion or turbulent areas and propagating it to the entire volume of the system, including storage tanks and cooling equipment.

The fluids used in hydraulic systems are available in a variety of chemical compositions and viscosity grades for specific applications.

The most commonly used media in hydraulic systems is a mineral oil-based fluid with various additives. Refer to Page No. 20 to 22 for the compatibility of different fluid media.

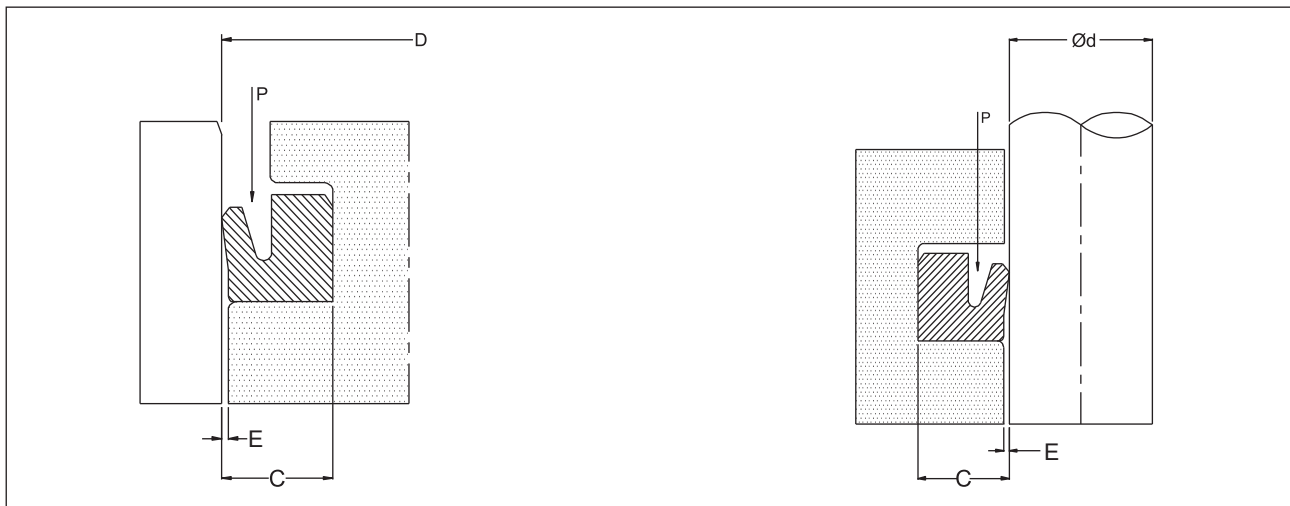

Chemical composition of hydraulic fluids will affect the service life and performance of the seal depends on compatibility of sealing materials. Non compatible fluid can cause,

- swelling or shrinking of seal
- hardening and embrittlement of the sealing material
- discoloration of the sealing material
- softening or loss of strength of the sealing material
- Polymer chains deteriorate or become tangled, resulting in material fatigue or loss

Extrusion Gap

Maximum admissible fitting clearance value between head/rod or piston /liner shall be carefully evaluated in order to prevent extrusion problems in the sealing area. This clearance gap mainly depends on the material hardness, maximum pressure in the cylinder, the temperature and load resistance of the guide rings. Please refer technical pages of each profile to understand the maximum extrusion gap shall be maintained.

HYDROGENATED NITRILE-BUTADIENE (HNBR / HSN)

The properties of HNBR depend upon the acrylonitrile content and the degree of hydrogenation of the butadiene copolymer. They have rather better oil and chemical resistance than Nitrile Rubber and can withstand much higher temperatures. It has excellent resistance to sour oil and gas, steam, hot water, and ozone. Physical properties (e.g. tensile and tear strength, elongation, abrasion resistance, compression set, etc.) are also excellent and compounds exhibit good dynamic behavior at elevated temperatures. Limitations include poor electrical properties, poor flame resistance, and attack by aromatic oils and polar organic solvents.

BUTYL RUBBER ((IIR)

Butyl rubber is also known as Isobutylene-isoprene (IIR). It has exceptionally low gas permeability making it ideal for inner tubes and high pressure/vacuum sealing applications. Its chemical unsaturation gives it excellent resistance to heat, ozone, and weathering. Very low resilience makes it suitable for shock and vibration damping and is not suitable for use in mineral or petroleum-based fluids.

ETHYLENE PROPYLENE DIENE RUBBER (EPDM)

EPDM is a copolymer of ethylene and propylene and a smaller amount of a diene monomer. It has excellent heat, ozone, and chemical resistance. Low-temperature resistance is excellent and also gives excellent electrical resistance. EPDM is not suitable for exposure to petroleum-based fluids and di-ester lubricants. (EPDM seals are peroxide cured and sulfur curing is used for EPDM cords)

SILICON RUBBER (VMQ) VINYL-METHYL-POLYSILOXANE

Silicone Rubbers are ideal for high and low-temperature applications. It is characterized by high thermal resistance, good cold flexibility, good dielectric properties, very good resistance to oxygen, and ozone attack. The main advantage is that it retains flexibility at very low temperatures and can withstand continuous heating without hardening, making it suitable for low and high-temperature applications. SILICON compounds have poor strength and tear resistance. Their resistance to oils and fuels is poor, concentrated acids and alkalis, water and steam at temperatures over 100°C will destroy the material.

POLYPROPYLENE (PP)

PP is one of the lightest polymers among all commodity plastics. This feature makes it a suitable option for lightweight/weight saving applications. It has excellent resistance to dilute and concentrated acids, alcohols and bases, and good resistance to aldehydes, esters, aliphatic hydrocarbons, ketones but limited resistance to aromatic and halogenated hydrocarbons and oxidizing agents. Polypropylene is a highly flammable material and it retains mechanical & electrical properties at elevated temperatures in humid conditions. PP has good resistance to environmental stress cracking.

Polyethylene is used in applications ranging for films, tubes, plastic parts, laminates, etc. in several markets (packaging, automotive, electrical, etc.). The most common types of polyethylene are

Low-density polyethylene (LDPE) – Features are flexible and good transparency, good moisture barrier properties, high impact strength at low temperature, excellent resistance to acids, bases, and vegetable oils.

Linear low-density polyethylene (LLDPE) - As compared to LDPE, it has higher tensile strength and higher impact and puncture resistance.

High-density polyethylene (HDPE) - Excellent Chemical Resistance, high tensile strength, excellent moisture barrier properties, hard to semi-flexible.

Ultra-high-molecular-weight polyethylene (UHMWPE) - It has excellent mechanical properties such as high abrasion resistance, impact strength, and low coefficient of friction. Even at high temperatures, it is resistant to several solvents, except aromatic, halogenated hydrocarbons, and strong oxidizing materials, such as nitric acid. UHMWPE is suitable for high wear applications.

Aggressive Fluids

CIP (Cleaning in Place) and SIP (Sterilization in Place) are the general method for cleaning processing systems. This process ensures safety and toxic contamination of products and minimize recontamination of the process.

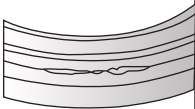

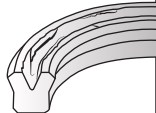

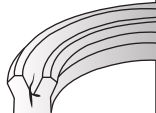

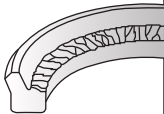

Sealing material should be compatible with the chemicals used in CIP & SIP process. Maxspare thus take care of this while selecting an appropriate sealing material.

Sealing performance of a seal is determined to a great extent by the method of assembling a cylinder. We recommend that customers adhere to the tolerance and surface finishes stated in this catalogue. Only by working to these values, the fitting of seals will be made easy and avoid damage during assembly.

1. It is important to keep the entire system and groove area clean and free of dirt and foreign particles.
2. Make sure to flush clean the internal face of cylinder and the interior of pipes. Use compressed air wherever possible.
3. Ensure that the cylinder and piston rod are chamfered.
4. Sharp edges should be deburred and filleted or chamfered.
5. Before assembling the cylinder, apply hydraulic oil (the same oil used in the machine) to the seal, gland, rod, surface, and the internal face of the cylinder.
6. Installation tool should not have any sharp edges.
7. The seals must be properly lubricated before installation
8. If grease is used for lubrication, it must not contain any solid additives (e.g., zinc sulphide or molybdenum disulphide). The grease should be compatible with the seal material.
9. When testing the cylinder after seal installation, it should not be out of the specified measures of pressure, temperature, linear velocity, etc.

INSTALLATION OF PISTON SEALS

U-Seals in closed grooves

The area between the sealing edge and the shaft is the most important. The sealing effect is obtained by preloading the sealing lip, making its inner diameter slightly smaller than the diameter of the shaft. The garter spring ensures constant mechanical pressure and maintains the radial force on the shaft and extends the sealing edge to the defined width. Sealing is guaranteed by the surface tension of the hydrodynamic oil film between the flattened area of the seal and the shaft. The oil thickness must be between 1 and 3 mm to avoid leakage. The meniscus acts as an interface between the outside air and the fluid. Any rupture of the meniscus will cause a leak. This can occur if the shaft contains scratches along the path of the joint.

PTFE Seals

PTFE seals or seals with thicker cross sections may require special assembly tools to save time or avoid seal damage during installation.

Dimensional Requirements: -

- 1) Piston Head Dia = d
- 2) Piston Head Length = L
- 3) Piston Head Total Length = $L1$ (in case of nut fitted)

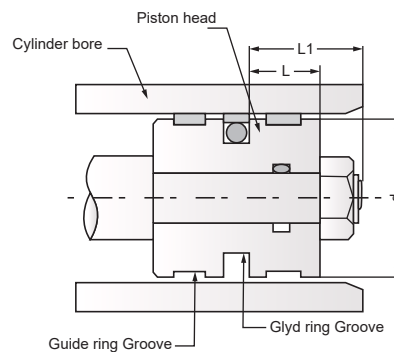

Fig. 1

Following are the steps to install PTFE Piston Seal Rings:-

Step 1

- Stretch the O-Ring and install in the groove.
- Place loading mandrel onto the piston head.

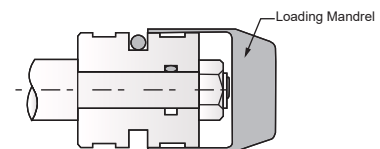

Fig. 2

Step 2

- Place Teflon ring on the loading mandrel.
- Place Pusher and push the PTFE ring up to the groove. Teflon ring will evenly expand and slide on the loading mandrel and fit into the groove without damage.

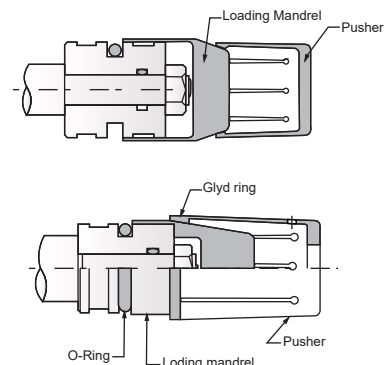

Fig. 3

Step 3:

After the installation, it can constrict the seal again using a Piston Seal Constrictor to make it close to the metal groove

Guideline to use Piston Seal Constrictor: -

- Place the cloth tape around the seal and use the constrictor to tighten it.
- It will take 3 to 5 minutes to reach the restoring effect
- A Red PU pad can fill the gap between the tape and the seal, avoiding leaks during the restoring process.

INSTALLATION OF ROD SEALS IN CLOSED GROOVES

U-Seals / PTFE Seals

The rod seals can often be installed into closed grooves by carefully bending the profile into a kidney shape and insert it in to the groove. It is very important to avoid sharp bending. Thin and flexible profiles can be installed by hand while Installation tools must be used to install the profiles with large cross section. After installation, the seal may need to be reshaped into a circular shape by using a cone-shaped tool.

A Seal Twistor can be used to install the Rod Seals. It can reduce the chance of seal damage while installation. Most failures of quality seals are due to bad installation or complicate groove designs. Maxspare introduce series of tools to complete the job reliably. Seal Twistor turns seal to an omega/kidney shape without acute angle (not suitable for fragile materials). It makes the size of seal smaller than the gland hole diameter. Seal can cross all over the sharp chamfers safely then rebounds in the groove.

Size	S		M		L		XL	
Gland hole Ø	22 – 30 mm	0.7" - 1.187"	30 – 50 mm	1.187" - 2"	50 – 70 mm	2" - 2.75	70 – 165 mm	2.75" - 6.5
C/S MAX.	5 mm	0.187"	6 mm	0.234"	10 mm	0.375"	17.5 mm	0.675"

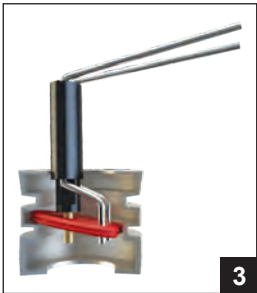

Following are the 4 steps to complete the Job: -

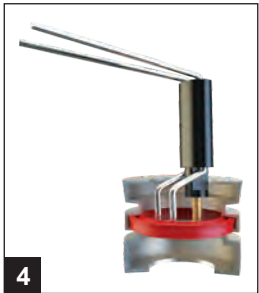

Fix the handle in the stand hole then put two arms inside the seal.

Twist the seal with guiding hand to prevent it popping out

Hold the handles, then put the seal into the gland hold carefully.

Turn handles back, then pull TWISTOR out to rebound the seal in the groove.

Storage Conditions:

Most polymers, including vulcanized rubber and other elastomers, tend to change their properties during storage and may become unusable. This may be due to hardening, softening, cracking or other deterioration and may result from exposure to oxygen, ozone, light, heat and / or moisture.

The following recommendations indicate the most suitable storage conditions for elastomeric products, whether it is a single item or a composite product.

- 1. Temperature** - Ideal storage temperature should be 25°C (77°F). Low temperatures are not permanently harmful provided the rubber items are handled carefully and not distorted. When taken from low temperatures items should be raised to approximately 30°C (86°F) before they are used.
- 2. Humidity** - Relative humidity is of 40% to 70% in a draft-free atmosphere.
- 3. Light** - The products should be protected from direct sunlight, ultraviolet and artificial light have a high UV content.
- 4. Oxygen and Ozone** - Wrapping, storage in airtight containers or other suitable means should be used for vulcanised rubber items. Storage in containers that limit exposure to environmental conditions (e.g. sealed plastic bags) should be used for all materials.
- 5. Radiation** - Products should be protected from all sources of ionizing radiation.
- 6. Deformation** - The rubber items should be stored in a relaxed position, without tension or compression. Laying the product on a flat surface and preventing its suspension or crushing keeps it from deforming and minimizes deformation.
- 7. Contact with liquid or semi-liquid materials** - Rubber should not come in to contact with liquid or semi-liquid materials or their vapours at any time during storage, unless these materials are an integral part of the product or the manufacture's packaging.
- 8. Contact with Metals** - Metals such as manganese, iron and copper, or copper alloys can have a harmful effect on rubber. A layer of paper, polyethylene or cellophane will keep these separated.
- 9. Contact with Non-Metals** - Contact with other rubbers should be avoided.
- 10. Stock Rotation** - Elastomers should be stored for as short a period as possible, and practice the First In First Out (FIFO system) stock liquidation.
- 11. Cleaning** - Organic solvents such as trichloroethylene, carbon tetrachloride and petroleum are the most harmful agents. Soap and water and methylated spirits are the least harmful, and all parts should be dried at room temperature before use.
- 12. Shelf Life** - The table shows the storage life of seal components made from the more common materials under ideal conditions. Storing under less than ideal conditions will reduce the life of the component.

Careful inspection for the following should be made before installation after storage:

- Cracks or Surface crazing
- Mechanical damage
- Permanent distortion
- Surface softening or hardening

DETAILS

P28 is an asymmetrical piston seal for general purpose and has good overall performance. Due to typical piston sealing design having a shorter external lip, it allows pressure to act into the groove ensuring a maximum lip contact with the bore in pressurised conditions. It is a seal suited for split piston but can also be used with a single piston if made in NBR. P28 seal is available in polyurethane material also. Due to excellent wear resistance properties of polyurethane, the life expected is 3 times than that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

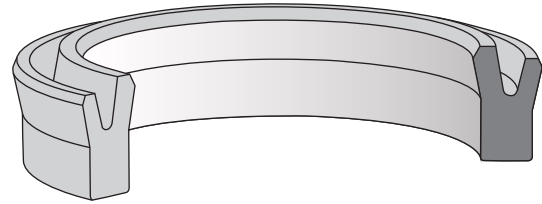

- Light to medium duty hydraulic cylinders.
- Also suitable for double acting cylinders.
- Can also be used in an equivalent of SUA piston seal.

FEATURES

- Good purpose seal.
- Good overall performance.
- Very good static and dynamic tightness.
- Robust design.
- Any size up to 3000 mm dia. available on request.

INSTALLATION & ASSEMBLY

DETAILS

P45 is a double acting piston seal suitable for light to medium duty hydraulic cylinders & suitable for cylinders with small groove dimensions thus enabling a compact piston. The P45 is a combination of O-ring energiser and outer seal ring made of PTFE added with a filler to increase the resistance of seal ring to high pressure. Generally, Bronze is the used as filler. But, Glass/Graphite filled PTFE seal can also be made.

The P45 seal can be easily mounted on a single piece piston and is also suitable for two-piece piston application. The Bronze filled PTFE outer seal ring, when in contact the cylinder bore, the PTFE ensures a stick slip free movement and reduces friction to a minimum. The filler increases the strength in the seal ring to prevent it from extruding and to withstand pressures as high as 400 BAR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

MATERIAL

Sealing Ring : Bronze filled PTFE
O Ring : Nitrile Rubber 70/75 Shore A
FKM 70/75 Shore A

DETAILS

P93 is a double-acting seal comprises of a Bronze filled PTFE seal ring, a quad ring and an O-Ring as energizing element. The seal ring energized with quad ring perform the dynamic sealing function, while the O-Ring performs a static sealing function.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

Application Presses, agricultural machinery, injection moulding machines, mills, marine hydraulics, industrial vehicles, cranes, handling equipment, control and regulation equipment.

FEATURES

- Excellent in separation of two different fluids.
- Well proven design.
- Self-lubricating seal ring.
- High surface speed.
- Friction at minimum & no issue with stick-slip.
- Compact design.
- Any size upto 1200mm available on request.

INSTALLATION & ASSEMBLY

The same installation procedure for piston seal P45 may be used for P93 also. Please refer to page no. 25 for the same. However, the quad ring should not be fitted until the P93 have been calibrated.

DETAILS

P58 is a double acting piston seal comprises of a polyurethane sealing ring and a rectangular section elastomer energizer ring. Polyurethane sealing element is robust, wear resistant, with a high modulus of elasticity which enables easier fitting. The energizer seal with rectangular cross section, prevents twisting in housing.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

Earth moving equipment, agricultural machinery, injection moulding machines, industrial vehicles, cranes, loading platforms.

FEATURES

- Contact pressure ring with flat energizer, prevents twisting in the housing.
- Good static and dynamic tightness.
- Low friction.
- Smooth movement at low speed.
- Low axial housing heights.

INSTALLATION & ASSEMBLY

Carefull fitting is a prerequisite for the correct function of the seal. The installation groove must be carefully deburred and cleaned and the cylinder bore must have an edge chamfer. The P58 seal can be snapped in to closed grooves.

DETAILS

P66 double acting compact piston seal is designed for use with split pistons. It comprises of a precision moulded fabric reinforced nitrile sealing element and two thermoplastic bearing rings on the outside diameter. The fabric reinforces the nitrile element and absorbs hydraulic fluid to help reduce friction. The bearing rings help prevent extrusion, permit higher working pressures and allow larger clearances between the piston and cylinder.

COMPATIBILITY

Mineral oils, hydraulic oils, water and air.

APPLICATION

Earth moving equipment, agricultural machinery, cranes, standard cylinders.

FEATURES

- High static and dynamic sealing application.
- Low friction.
- Well proven design.
- Tolerant to contamination.

MATERIAL

Sealing Ring : Nitrile Rubber / Fabric 75/80 Shore A
Bearing rings : POM / Nylon

OPERATING CONDITIONS

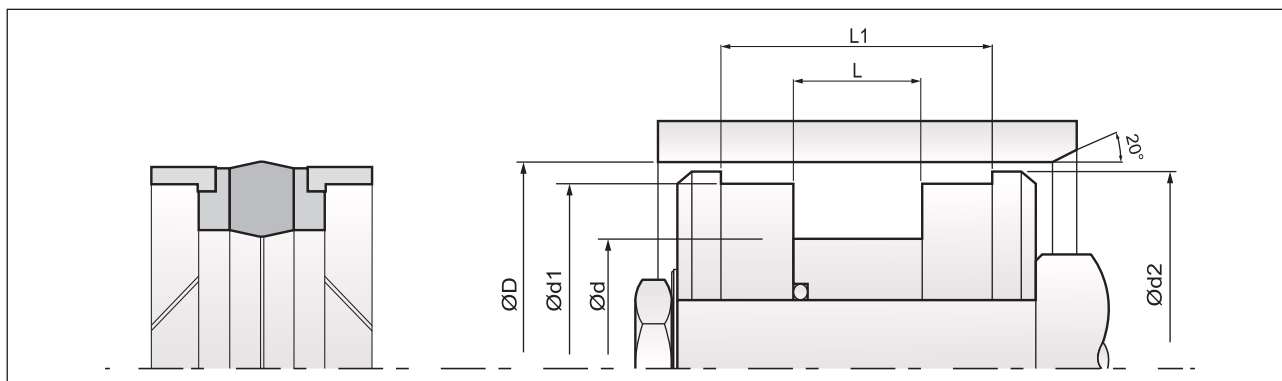

Temperature Range : -20°C to + 100°C
Pressure : 500 Bar
Speed : 0.5 m/s

SURFACE ROUGHNESS

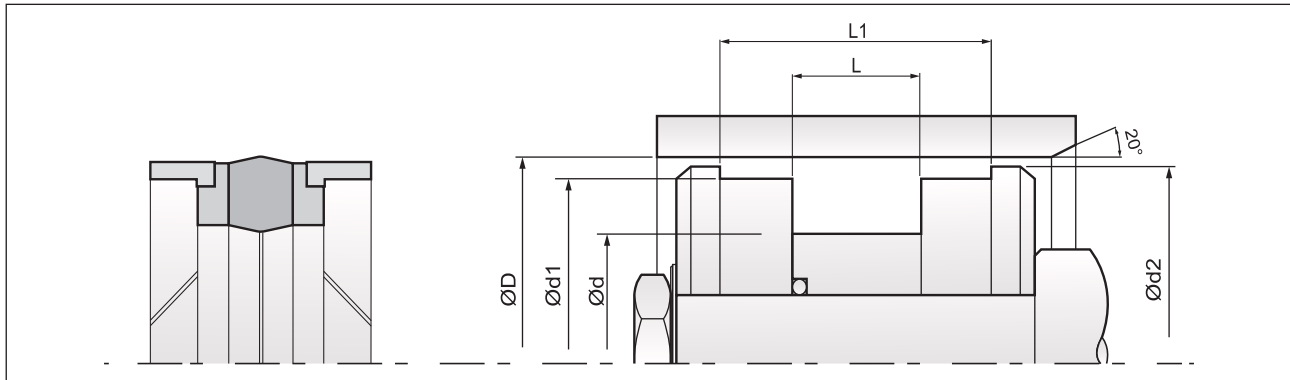

Static : 1.6 µmRa
Dynamic : 0.4 µmRa

DETAILS

P60 is a robust heavy duty double acting piston seal commonly used for the most demanding high-pressure application. It comprises of a T-shaped elastomer (NBR) which provides the initial energizing for effective sealing at low and high pressures. The elastomer preloads a composite PTFE ring against the tube wall and the thermoplastic bearing provides resistance to extrusion to the NBR sealing element. The P60 seal integrates the benefits of compact design, low friction and high performance in a single piston seal. Its design offers overall stability, wear resistance, sealability, low friction compact grooves, easy installation and maintenance free long life.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Heavy duty cylinders.
- Injection moulding machines.
- Earthmoving equipment.
- Excavators.
- Presses.

FEATURES

- High pressure capability.
- Excellent pressure surge absorption capability.
- Best combination for load holding and low friction sealing.
- High resistance to abrasion.

INSTALLATION & ASSEMBLY

Careful installation is a prerequisite for the correct function of the seal. The groove must be free from pores, scratches etc.

DETAILS

P69 is a robust heavy-duty double-acting piston seal assembly for split pistons. It has been designed to meet the high pressures subject to severe load and vibration conditions. It comprises of a nitrile sealing element with two endless fabric reinforced nitrile support rings, these rings energizes when the pressure is applied. The two endless thermoplastic bear rings function as anti-extrusion rings. This seal has a pressure rating of 700 bar. Seal sets with split backup rings and bearing rings are available on request.

COMPATIBILITY

Hydraulic oils based on mineral oil and PAO fluids.

APPLICATION

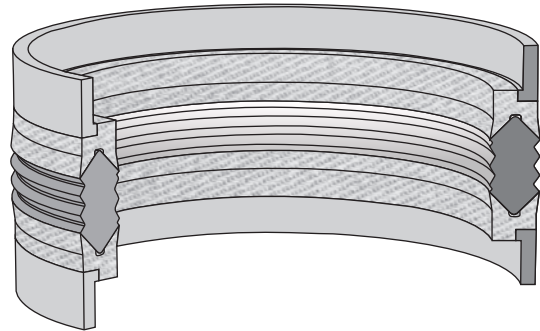

- Heavy duty cylinders.
- Agricultural Machines.
- Industrial Trucks.
- Excavators, cranes, marine hydraulics.

FEATURES

- High static and dynamic sealing application.
- Low friction.
- Well proven design.
- Tolerant to contamination.
- Effective sealing while vibration and shock loading.

INSTALLATION & ASSEMBLY

P69 piston seal has been designed for the installation in the open grooves because of its endless backup ring. It is necessary to have a closed groove, the back up rings should be in split type and installed afterwards. It is very important that the assembly tool must be of soft material and have no sharp edges. Also, the seal must lubricate before installation.

DETAILS

P76 is a robust heavy duty double acting piston seal. P76 seal consists of 6 parts, elastomeric energiser ring, Bronze Filled PTFE sealing ring, two backup rings made of Thermoplastic polymers and two bearing rings. The elastomeric ring energises the sealing ring to force it against cylinder bore, providing a sealing function at low pressure. The two backup rings prevent gap extrusion of the sealing ring at high pressures. Two bearing rings make contact with cylinder bore which guide the piston during heavy load condition.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

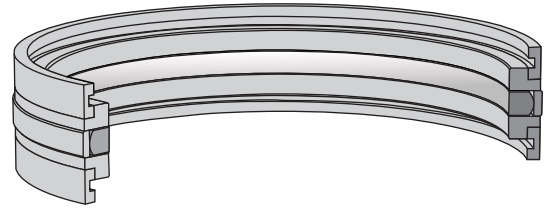

- Construction machine cylinders.
- Stick slip free operation.
- Big diameters & long stroke cylinders.

FEATURES

- High pressure capability.
- Wide bearing ring, to take maximum load.
- Easy to assemble.

INSTALLATION & ASSEMBLY

The P76 profile has been designed for installation in closed grooves. Careful fitting is a prerequisite for the correct functioning of the seal. The installation groove must be carefully deburred and cleaned.

DETAILS

P42 seal is robust V-Packing seal. Though it is suitable for split piston, it is extremely suitable for medium duty to heavy duty application. The P42 seal accepts low & high pressure, vigorous conditions & also any misalignment between sealing gaps. The seal is a combination of a female adaptor centre ring & male adaptor. The centre ring is the main seal being flexible enough to retain high & low pressures. The female adaptor supports the centre ring from getting extruded against high pressures. The male adaptor helps in retaining the centre ring profile & distributing the pressure equally. Besides, P43 (1+2+1) is available with 1 extra centre ring to adjust groove height.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

Medium to heavy duty single acting cylinder with split piston. Also suitable for double acting cylinders.

DETAILS

P43 seal is robust V-Packing seal. Though it is suitable for split piston it is extremely suitable for medium duty to heavy duty application. The P43 seal accepts low & high pressure, vigorous conditions & also any misalignment between sealing gaps. The seal is a combination of a female adaptor centre ring & male adaptor. The centre ring is the main seal being flexible enough to retain high & low pressures. The female adaptor supports the centre ring from getting extruded against high pressures. The male adaptor helps in retaining the centre ring profile & distributing the pressure equally.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

Medium to heavy duty single acting cylinder with split piston.
Also suitable for double acting cylinders.

FEATURES

- Long life.
- Accepts misalignment & uneven surfaces.
- Any size upto 1500 mm diameter available.

DETAILS

S19 seal is a flexible seal suitable for sealing piston rod. The additional O-ring profile at the bottom provides as a back-up to the main sealing lip, providing lubrication, abrasion resistance & remains unaffected with varying pressures. Also available in nitrile (NBR) up to 160 BAR besides Polyurethane for 400 BAR. Due to excellent wear resistance properties of polyurethane, the life expected is 3 times that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

- Light to medium duty hydraulic cylinders.
- Can also be used in conjunction with S15 style rod seals for heavy duty applications.
- Mining equipment.
- Hydraulic presses.

FEATURES

- Simple installation.
- Long service life.
- An O-ring profile at bottom improves sealing & serves as a good back-up to the main sealing lip.
- It wipes off small traces of oil that passes the sealing lip with every stroke.

INSTALLATION & ASSEMBLY

Careful fitting is a prerequisite for the correct functioning of the seal. Pl. refer to page no. 26 for guidelines.

DETAILS

S20 seal is suited for solid gland. Easy to snap into groove thus makes installation easy for this seal. The S20 seal is available in 2 versions, NBR & Polyurethane compound. Due to excellent wear resistance properties of polyurethane, the life expected is 3 times that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

- Light to medium duty cylinders.
- Can also be used in conjunction with S15 style rod seals for heavy duty applications.
- Mining equipment.
- Hydraulic presses.

FEATURES

- Simple installation.
- Good media resistance.
- Used as an individual seal or as a secondary seal possible within sealing system.

INSTALLATION & ASSEMBLY

Careful fitting is a prerequisite for the correct functioning of the seal. Pl. refer to page no. 26 for guidelines.

DETAILS

S21 is a symmetrical single acting seal offering excellent dry rod sealing for both light and medium duty applications. The additional O-ring profile at the bottom provides a back-up to the main sealing lip, providing lubrication, abrasion resistance & remaining unaffected with varying pressures. Standard material for S21 is Polyurethane but we can also supply in NBR material (on request). Due to excellent wear resistance properties of polyurethane, the life expected is 3 times that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

- Light to medium duty hydraulic cylinders.
- Mining equipment.
- Hydraulic presses.

FEATURES

- Suitable for power fluctuations.
- Low friction.
- Double lip design offers primary lip protection.
- Increased seal stability.

INSTALLATION & ASSEMBLY

Careful fitting is a prerequisite for the correct functioning of the seal. Pl. refer to page no. 26 for guidelines.

DETAILS

S15 is a single acting rod seal suitable for light to medium duty hydraulic cylinders and is suitable for cylinders with a small groove dimensions, thus enabling a compact gland. The S15 is a combination of O-ring energizer and outer seal ring made of PTFE added with a filler to increase the resistance of seal ring to high pressure. Generally, Bronze is used as filler. But, Glass/Graphite filled PTFE can also be made.

The S15 seal can easily be fitted in a single gland and also suitable for a 2-piece Gland application. The Bronze filled PTFE inner seal ring when in contact with the piston rod, the PTFE ensure a stick slip-free movement & reduces friction to a minimum. Whereas the filler increases the strength in the seal ring to prevent it from extruding & to withstand pressure as high as 400 BAR.

DETAILS

S16 is a single-acting rod seal, comprises of a Bronze filled PTFE sealing ring and one elastomeric flat energizer element. The asymmetrical cross-sectional design of the sealing ring is best to drag oil performance during stroke in both directions.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

Presses, agricultural machinery, injection moulding machines, mills, marine hydraulics, industrial vehicles, cranes, handling equipment, control and regulation equipment.

FEATURES

- Well proven design.
- Self-lubricating seal ring.
- High surface speed.
- Friction at minimum.
- Compact gland.
- Any size upto 1200 mm available on request.

INSTALLATION & ASSEMBLY

When mounting the S16, the elastomer energizer ring is first placed in the groove of the housing and then the seal ring is deformed to take the form of a kidney and is put in place. During this process, make sure that the PTFE profile ring does not have any sharp edges and the sealing edge is properly positioned with respect to the direction of pressure. The complete fitting operation can be performed only on the rounded edges. Please refer to page no.26 for guidelines.

DETAILS

S59 is a single-acting robust seal. Though it is suitable for a split piston, it is extremely suitable for medium-duty to heavy-duty application. The S59 seal accepts low & high pressure, vigorous conditions & also any misalignment between sealing gaps. The seal is a combination of a bottom seal, center ring & pressure ring. The center ring is the main seal being flexible enough to retain high & low pressures. The bottom seal supports the center ring from getting extruded against high pressures. The top ring helps in retaining the center ring profile & distributing pressure equally. In many cases, the S59 seals can also be split to enable ease of fitment. Besides, S60 (1+5+1) is available with 2 extra center rings to adjust groove height.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

Medium to heavy duty single acting cylinder with split piston.

FEATURES

- Long life.
- Accepts misalignment and uneven surfaces.
- Any size endless up to 1500 mm diameter available.

DETAILS

S60 is a single-acting robust seal. Though it is suitable for a split piston, it is extremely suitable for medium-duty to heavy-duty application. The S60 seal accepts low & high pressure, vigorous conditions & also any misalignment between sealing gaps. The seal is a combination of a bottom seal, center ring & pressure ring. The center ring is the main seal being flexible enough to retain high & low pressures. The bottom seal supports the center ring from getting extruded against high pressures. The top ring helps in retaining the center ring profile & distributing pressure equally. In many cases, the S60 seals can also be split to enable ease of fitment.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

Medium to heavy duty single acting cylinder with split piston.

DETAILS

E07 seal is a general-purpose seal designed to have symmetrical lips introduces to used for both piston and rod seal application. This seal is suited for split piston but can also be used with a single piston. The E07 seal is available in 2 varieties of materials: i.e. NBR and polyurethane. Considering the economic factor with our seal performance, the E07 seals made out of NBR are most suitable up to a pressure of 150 BAR and extremely economical. Also, another good factor is the preload pressure applied by the seal ensures good sealing at low pressures & also misalignment in the movement of the Piston Rod. Due to excellent wear resistance properties of polyurethane the life expected is 3 times that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

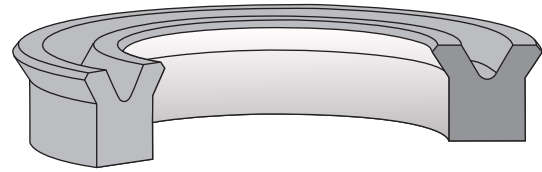

- Light to medium duty hydraulic cylinders.
- Also suitable for double acting cylinders.
- Can also be used as a rod seal in conjunction with S15 style rod seal for heavy duty application.

FEATURES

- Good overall performance.
- Preload squeeze ensures good sealing.
- Good temperature resistance.
- Static & dynamic sealing effect.
- Any size up to 1500 mm dia. available on request.
- Can also be used as a Rod Seal.

INSTALLATION & ASSEMBLY

E07 u seals are easily assembled into closed groove. Carefull fitting is a prerequisite for the correct functioning of the seal. Kindly refer to page no.26 for installation procedures.

DETAILS

E08 seals are square cross-sectional loaded symmetrical U cup for use in either rod or piston applications. It is a conventional lip seal to produce a unique sealing in a vacuum, low and high-pressure applications. At zero or low pressure, the O-ring helps to increase the sealing force preventing any bypass. Under most conditions as the pressure rises, the sealing force increases and the O-ring ensures complete lip actuation. The symmetry of this seal is suited for single-acting rod and piston applications, whereas it can also be fitted back to back in separate glands for the use in double-acting applications. To protect against pressure trapping, it is recommended that the O-ring should be removed from the seal facing the lower pressure side of the application.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium duty hydraulic cylinders, holding platforms.
- Suitable for double acting cylinders.
- Can also be used as a Rod Seal in conjunction with S15 style Rod Seal for heavy applications.
- Can also be used in equivalent to S19 Rod Seal.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- Easily retrofits other seals.
- Precision trimmed sealing lips.
- Easy to install.

INSTALLATION & ASSEMBLY

Careful fitting is the prerequisite for the correct functioning of the seal. Recommended to use Maxspare Seal Twistor for easy installation. The seal must be properly lubricated before installation.

DETAILS

E09 seals are rectangular cross-sectional loaded U cups for use in either rod or piston applications. The added length improves the stability in high stroke, high-pressure applications. It is a conventional lip seal to produce a unique sealing in a vacuum, low and high-pressure applications. At zero or low pressure, the O-ring helps to increase the sealing force preventing any bypass. Under most conditions as the pressure rises, the sealing force increases and the O-ring ensures complete lip actuation. The symmetry of this seal is suited for single-acting rod and piston applications. E09 should not be installed back to back in bi-directional piston applications, as a pressure trap between the seals may occur.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

- Medium duty hydraulic cylinders, holding platforms.
- Suitable for double acting cylinders.
- Can also be used as a Rod Seal in conjunction with S15 style Rod Seal for heavy applications.
- Can also be used in equivalent to S19 Rod Seal.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- Easily retrofits other seals.
- Precision trimmed sealing lips.
- Easy to install.

INSTALLATION & ASSEMBLY

Careful fitting is the prerequisite for the correct functioning of the seal. Recommended to use Maxspare Seal Twistor for easy installation. The seal must be properly lubricated before installation.

DETAILS

E10 seals add a back-bevel lip to the E09 and are used in both rod or piston applications. The rectangular shape of its cross-section ensures stability in the gland and the added length improves the stability in high stroke, high-pressure applications. It is a conventional lip seal to produce a unique sealing in a vacuum, low and high-pressure applications. At zero or low pressure, the O-ring helps to increase the sealing force preventing any bypass. Under most conditions as the pressure rises, the sealing force increases and the O-ring ensures complete lip actuation. The symmetry of this seal is suited for single-acting rod and piston applications. E10 should not be installed back to back in bi-directional piston applications as a pressure trap between the seals may occur.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium duty hydraulic cylinders, holding platforms.
- Suitable for double acting cylinders.
- Can also be used as a Rod Seal in conjunction with S15 style Rod Seal for heavy applications.
- Can also be used in equivalent to S19 Rod Seal.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- Easily retrofits other seals.

INSTALLATION & ASSEMBLY

E10 U seals are easily assembled into closed groove. Careful fitting is a prerequisite for the correct functioning of the seal. Recommended to use Maxspare Seal Twistor for easy installation. The seal must be properly lubricated before installation.

DETAILS

E15 seal is a combination of U-cup loaded with quad ring in between precision trimmed sealing lips. It is a conventional lip type seal to produce a unique sealing capable of sealing in vacuum & high and low-pressure application. The standard polyurethane material provides high wear resistance and quad ring energizer functions as a spring to maintain sealing contact under low pressure or vacuum applications.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium duty hydraulic cylinders, holding platforms.
- Suitable for double acting cylinders.
- Can also be used as a Rod Seal in conjunction with S15 style rod seal for heavy applications.
- Can also be used in equivalent to S19 rod seal.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- Easily retrofits other seals.
- Precision trimmed lips.
- Easy to install.

INSTALLATION & ASSEMBLY

Careful fitting is the prerequisite for the correct functioning of the seal. Recommended to use Maxspare Seal Twistor for easy installation. The seal must be properly lubricated before installation.

DETAILS

E19 seal is a single acting robust design seal used for medium to heavy duty applications. This seal comprises of a rubberised fabric U seal base bonded to a rubber energiser and needs split piston. The seal comprises a rubberized fabric which is bonded to a nitrile energizer and needs a split housing. The seal section is pre-loaded by the housing when installed to ensure effective sealing at low pressure. When the pressure increases, the nitrile energizes the fabric to increase the sealing area and hence improving the efficiency of the seal. The strength and durability of the rubberized fabric combines with its ability to retain lubricant keeping friction and wear to a minimum.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

- Medium to heavy duty hydraulic presses.
- Steel mills, earthmoving equipments.
- Requires split gland.
- Can also be used as a piston seal.

FEATURES

- Excellent sealability during high pressure.
- Long service life.
- General purpose seal.

INSTALLATION & ASSEMBLY

E19 seals are fitted in split piston / open grooves with retainer ring.

DETAILS

E25 seal is a single acting robust design seal used for medium to heavy duty applications. This seal comprises of a rubberised fabric U seal base bonded to a rubber energiser. The seal section is pre-loaded by the housing when installed to ensure effective sealing at low pressure. When the pressure increases the rubber energises the U seal to increase the sealing area and hence the efficiency of the seal. The strength and durability of the rubberized fabric combines with its ability to retain lubricant keeping friction and wear to a minimum.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

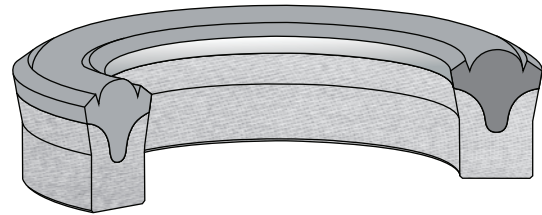

- Medium to heavy duty hydraulic presses.
- Standard cylinders, telescopic cylinders.
- Machine tools.
- Can also be used as a piston seal.

FEATURES

- Excellent sealability during low & high pressure.
- Well proven design.
- Long service life.
- Good wear resistance.
- Low friction due to fabric reinforcement.

INSTALLATION & ASSEMBLY

E25 seals are fitted in split piston / open grooves with retainer ring.

DETAILS

E16 seal is a single acting robust design seal used for medium to heavy duty applications. This seal comprises of a rubberised fabric U seal base bonded to a rubber energiser and it needs split housing. The seal section is pre-loaded by the housing when installed to ensure effective sealing at low pressure. When the pressure increases, the nitrile energizes the fabric to increase the sealing area and hence improving the efficiency of the seal. The strength and durability of the rubberized fabric combines with its ability to retain lubricant keeping friction and wear to a minimum.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

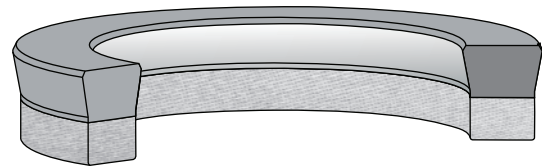

- Low to heavy duty hydraulic presses.
- Valves spindles.
- Mobile hydraulic presses.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- Good chemical resistance.
- Small cross section.
- Wide range of sizes available.

INSTALLATION & ASSEMBLY

Careful installation is a prerequisite for the correct functioning of the seal. E16 seal requires split housing. In order to avoid damage during installation, load-in-shoulder of min. 5 x 20° must be provided on the rods and the seal groove must be free from pores, scratches etc.

DETAILS

E26 seal is a single acting robust design seal used for medium to heavy duty applications. This seal comprises of a rubberised fabric U seal base bonded to a rubber energiser and it needs split housing. The seal section is pre-loaded by the housing when installed to ensure effective sealing at low pressure. When the pressure increases, the nitrile energizes the fabric to increase the sealing area and hence improving the efficiency of the seal. The strength and durability of the rubberized fabric combines with its ability to retain lubricant keeping friction and wear to a minimum.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Low to heavy duty hydraulic presses.
- Valves spindles.
- Mobile hydraulic presses.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- Good chemical resistance.
- Small cross section.
- Wide range of sizes available.

INSTALLATION & ASSEMBLY

Careful installation is a prerequisite for the correct functioning of the seal. E26 seal requires split housing. In order to avoid damage during installation, load-in-shoulder of min. 5 x 20° must be provided on the rods and the seal groove must be free from pores, scratches etc.

DETAILS

E17 seal is a single acting robust design seal used for medium to heavy duty applications. This seal comprises of a rubberised fabric U seal base bonded to a rubber energiser. The seal section is pre-loaded by the housing when installed to ensure effective sealing at low pressure. When the pressure increases the rubber energises the U seal to increase the sealing area and hence the efficiency of the seal. The strength and durability of the rubberized fabric combines with its ability to retain lubricant keeping friction and wear to a minimum.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

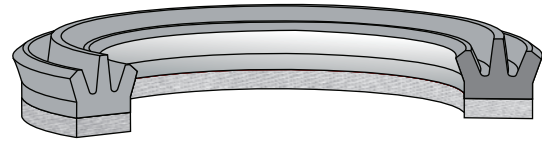

- Medium to heavy duty hydraulic presses.
- Standard cylinders, telescopic cylinders.
- Machine tools.
- Can also be used as a piston seal.

FEATURES

- Excellent sealability during low & high pressure.
- Well proven design.
- Long service life.
- Good wear resistance.
- Low friction due to fabric reinforcement.

INSTALLATION & ASSEMBLY

Careful fitting is a prerequisite for the correct functioning of the seal. This seal requires split glands and fitted with retainer ring. The seal must be properly lubricated before installation.

DETAILS

E18 seal is a single acting seal used for medium duty applications. This seal comprises of a rubberised fabric U seal and rubber header ring. The rubber energizer ring provides extra pretension on the sealing lip of the u seal, so it ensures effective sealing at low pressure. When the pressure increases the rubber energises the 'U' seal to increase the sealing area and hence the efficiency of the seal.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium to heavy duty hydraulic cylinders.
- Requires split gland.
- Can also be used as a piston seal.

FEATURES

- Excellent sealability during low & high pressure.
- Long service life.
- General purpose seal.

INSTALLATION & ASSEMBLY

The sealing area must be free from pores, scratches etc. for the correct functioning of the seal. The seal must be properly lubricated before installation and also ensure that there is no damage to the sealing lips while installation.

DETAILS

W11 wiper has a lip designed to remove dirt, mud, dust, moisture, etc. accumulating on the rod to avoid wear and damage to the internal components including seals. This wiper is manufactured from a high hardness NBR compound suitable for installing in a grooved housing. To prevent dirt passing the outside of wiper and to reduce the pumping action, the outside diameter has an interference fit with the housing. Due to excellent wear resistance of polyurethane the life expected is 3 times than that of NBR. This wiper is also available in FKM (viton) for high temperature applications.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids

APPLICATION

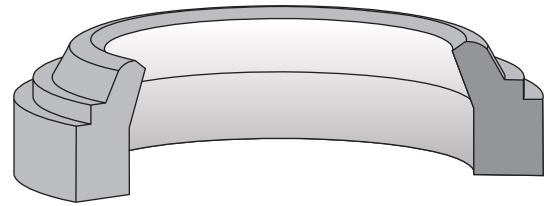

- Medium duty seal (For heavy duty application, select polyurethane as the material).
- Hydraulic and Pneumatic cylinders.
- Standard cylinders.

FEATURES

- General purpose seal.
- Good wiping performance.
- Precision trimmed sealing lip.
- No twisting in the groove.
- Wide range of sizes.

INSTALLATION & ASSEMBLY

Wiper seal can be easily fitted into the closed grooves by deforming it into kidney shape. The assembly tool must have no sharp edges. The seal must lubricate before installation.

DETAILS

W12 wiper is a double function seal. This wiper is designed to exclude dirt and moisture from entering the cylinder and to collect traces of fluid passing the rod seal. Opposite the wiper lip are two sealing lips to collect fluid passing the rod seal. Providing a simple groove design and dual function, the type W12 wiper offers excellent scraping action, even with high accumulating dirt, dust and moisture conditions. Though the standard material is NBR. This wiper is also available in polyurethane. Due to excellent wear resistance properties of polyurethane, the life expected is 3 times than that of NBR. This wiper is also available in FKM (Viton) material for high temperature applications.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium duty seal (For heavy duty application, select polyurethane as the material).
- Hydraulic and Pneumatic cylinders.
- Standard cylinders.

FEATURES

- General purpose seal.
- Good wiping performance.
- Twins lip ensures drier sealing system.
- No twisting in the groove.
- Good stability.
- Wide range of sizes.
- Easy installation.

INSTALLATION & ASSEMBLY

W12 wiper seal can be easily fitted into the closed grooves by deforming it into kidney shape. The assembly tool must have no sharp edges. The seal must lubricate before installation.

DETAILS

W10 wiper has a lip designed to remove dirt, mud, dust, moisture etc. accumulating on the rod. The wiper is manufactured from a high hardness NBR compound suitable for installing in a simple groove design. The lip of this wiper does not project beyond the cylinder cover to protect it from damage. Due to excellent wear resistance of polyurethane the life expected is 3 times than that of NBR. This wiper is also available in FKM (viton) material for high temperature application.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium duty.
- Hydraulic and Pneumatic cylinders.

DETAILS

W14 is a single acting metal-cased wiper seal, designed to press fit into open groove housings for light and medium-duty applications. The precision moulded Nitrile rubber (NBR) wiping element is bonded to a metal case treated to prevent rust. The proportions of the NBR wiping lip follow the side movement of the rod to clear away the deposited dirt. W14 also available in Polyurethane material. Due to excellent wear resistance of polyurethane the life expected is 3 times than that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

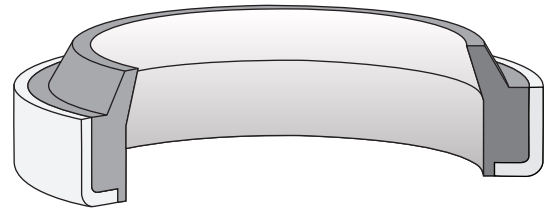

- Light to Medium duty machineries.
- Hydraulic and Pneumatic cylinders.

FEATURES

- General purpose seal.

DETAILS

W15 is a single acting metal-cased wiper seal, designed to press fit into open groove housings for light and medium-duty applications. The precision moulded Nitrile rubber (NBR) wiping element is bonded to a metal case treated to prevent rust. The proportions of the NBR wiping lip follow the side movement of the rod to clear away the deposited dirt. W15 also available in Polyurethane material. Due to excellent wear resistance of polyurethane the life expected is 3 times than that of NBR.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Light to Medium duty cylinders.
- Hydraulic and Pneumatic cylinders.

FEATURES

- General purpose seal.
- Good wiping performance.

DETAILS

W16 is a double acting wiper seal. The internal wiping lip controls the lubrication film on the rod and wipes off the excess fluid from the rod on extending stroke and allows this excess fluid to return under the rod seal on retracting stroke. Thus, the double acting wipers extend the service life and improve the sealing performance of the rod system.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Injection moulding machines, presses, fork lift & material handling equipments.
- Medium duty mining, cranes, telescopic cylinders, loading platforms etc.

FEATURES

- Good wiping performance.
- Can be subjected to heavy duty.
- Easy press fit installation in open grooves.
- Long service life.
- Sealing lips directed in words gives both side wiping effect.
- Seal retainer not required.

INSTALLATION & ASSEMBLY

W16 seals are press fit into axially open grooves. The fitting tool must have no sharp edges. The seal must lubricate before installation.

DETAILS

W30 wipers are used in applications where standard elastomer wipers fails quickly as a result of contaminants adhering to the piston rod. The wiper comprises a metal housing with an integral brass scraper and elastomeric wiper ring. The brass scraper has radial clearance in the housing. The brass scraper removes any stubborn dirt from the rod, leaving the secondary elastomer wiper to remove smaller loose particles of dust, water etc. These wipers are mainly used in dusty environment like mining & steel works.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

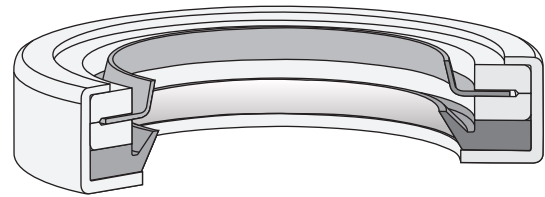

- Heavy duty applications.
- Wiper for hydraulic cylinders.

FEATURES

- Very good wiping performance.
- Subjected to heavy & dusty areas.
- Seal retainer not required.
- Easy installation in open grooves.
- Maximum advantages compared to elastomeric wipers.
- Long service life.

INSTALLATION & ASSEMBLY

W30 seals are press fit into axially open grooves. The fitting tool must have no sharp edges. The seal must lubricate before installation.

DETAILS

W13 wiper is a double lip function seal designed to prevent the ingress of contaminants to enter in to the system and assist in sealing the rod. This is achieved by a special design which largely prevents scoring, protects the guiding parts and extends the service life of the seal. In addition, the sealing lip facing the media reduces the residual oil film. providing a simple groove design this wiper is supplied as a continuous ring for easy installation into the groove.

The standard material for W13 wiper seal is polyurethane material. The use of Polyurethane with it's excellent properties combined with the proportioned design of the wiper will extend the service life of the rod seal. This wiper seal is also available in NBR material on request.

DETAILS

W38 is a double acting wiper seal with two geometrically different wiping lips suitable for medium to heavy duty hydraulic cylinders with small groove dimensions. It comprises of combination of O-ring energiser and outer seal ring made of PTFE added with a filler to increase the resistance of seal ring to wear & tear. The o-ring energizer provides the force necessary to maintain the pressure of the wiping lips against the sliding surface and allow the wiper to adjust for deflection. Generally, Bronze is used as filler. But, Glass/Graphite filled PTFE can also be made. The Bronze filled PTFE liner seal ring when in contact with the piston rod ensures a stick slip free movement & reduces friction to a

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- Medium duty, can also be used with heavy duty cycle applications.
- Indoortype machines.
- Mobile hydraulic, injection machines, industrial equipments.

FEATURES

- Self-lubricating seal ring.
- Very good scraping effect.

DETAILS

W39 is a double-acting, twin o-ring energized, rod wiper seal designed to include two different unique wiping geometries. The two lips combine to scrape debris from the rod and contain residual oil on rod extension, as well as allowing oil to pump back into the cylinder. The o-ring energizers provide the force necessary to maintain the engagement of the wiping lips against the sliding surface and allow the wiper to adjust for deflection. Generally, Bronze is used as filler. But, Glass/Graphite filled PTFE can also be made. The Bronze filled PTFE liner seal ring when in contact with the piston rod ensures a stick slip free movement & reduces friction to a minimum.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

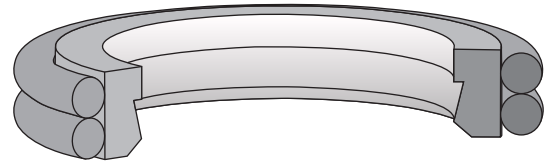

- Medium duty, can also be used with heavy duty cycle applications.
- Indoor type machines.
- Mobile hydraulic, injection machines, industrial equipments.

FEATURES

- Self-lubricating seal ring.
- Very good scraping effect.

GS	GUIDE STRIP		PISTON/ROD	-	-200°C TO +260°C	1.0	437

Introduction

Maxspare offers a complete line of guide ring and guide strip to fit any hydraulic or pneumatic application. Guides adjust the radial loads of the forces acting on the cylinder assembly and guide the rod in the cylinder head, as well as the piston in the cylinder bore. The guide ring prevents metal-to-metal contact and improves the seal life performance. Compared to the metal guides the polymer guides have many advantages. Maxspare supplies different precision moulded and machined guide rings with different polymers and sizes, which make appropriate for your applications.

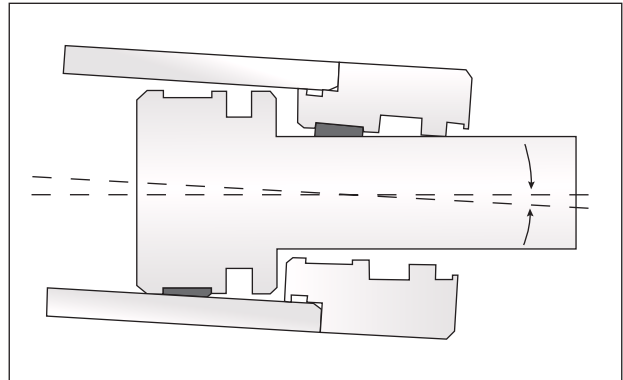

Applications

- Hydraulic and Pneumatic Cylinders.
- Chemical and process industry.
- Packaging Filling Machine.

- Automation.
- Industrial Booster Pumps.
- Cryogenic Pumping Systems.
- Machine tools.
- Injection moulding machines.

Advantages

- Prevents metal-to-metal contacts in cylinders self lubricating feature.
- High load bearing capacity.
- Eliminates local stress concentrations.
- Wear-resistant.
- Long service life.
- Low friction between the sliding metallic components.
- Damping of vibrations.
- Improves seal life performance.
- Large contact area due to higher degree of elastic deformation distributes the load and reduces stress to counter-surface.
- Provide guidance and alignment.
- Act as a good wiper.
- Eliminates hydrodynamic pressure problems in the guide system.
- Easy installation even in closed grooves.
- Low service costs.

Design Instructions

The guide ring has a rectangular cross-section with chamfered edges, thus preventing edge forces from becoming too high in the corner radial of the grooves. Chamfers too facilitate installation easier. Depending on the material, wear rings are supplied in split or endless or as a strip. This Strip material is available in rolls (meters)

Non-Cut / Endless Guide Ring

Used primarily in piston and rod applications under 0.500" in diameter.

Angle / Oblique Cut Guide Ring

Angled cuts are recommended for use in reciprocating applications.

Butt / Straight Cut Guide Ring

Straight cuts are for rotary applications.

Step / Z Cut Guide Ring

Stepped cuts are used in special applications, e.g. for flow restriction. Use to help to provide piston guidance and help reduce pressure pulses on the piston seal.

Guide Ring Height Selection

While selecting the guide ring height, it is important to evaluate the transverse load that the guide ring will have to withstand. The elastic deformation, deflection and stretching of the components under the load creates an angular deviation between the piston and bore or rod and gland cap. Therefore, an assumption-based approach is recommended to determine the transverse load that occurred on the cylinder. As per thump rule, about 10-15% of the hydraulic force is applied as a transverse load.

The fig.... shows the total pressure area that the transverse force (F) from the side load will affect. The guide ring height (H) required for an application can be calculated from the below formula:

$$H_{min} = \frac{F \times f}{d \times Pr}$$

where:

- F = Maximum radial load (N)
- f = Safety factor (f=2)
- d/D = Rod / Bore diameter (mm)
- Pr = Permissible surface pressure (N/mm²)
- H_{min} = Minimum guide ring height (mm)

For Example:

- d = 100
- F = 60000 N
- f = 2
- Pr = 100 N/mm²

$$H_{min} = \frac{60000 \times 2}{100 \times 100} = 12 \text{ mm}$$

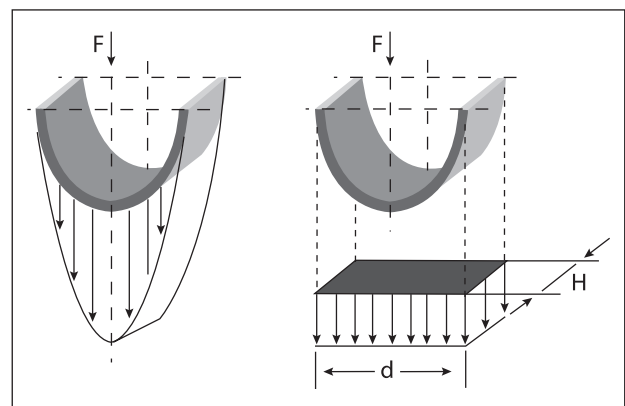

Fig. Calculation of guide ring height

The closest larger standard groove width of 15 mm must be selected for the above case.

Linear Length of Guide Ring

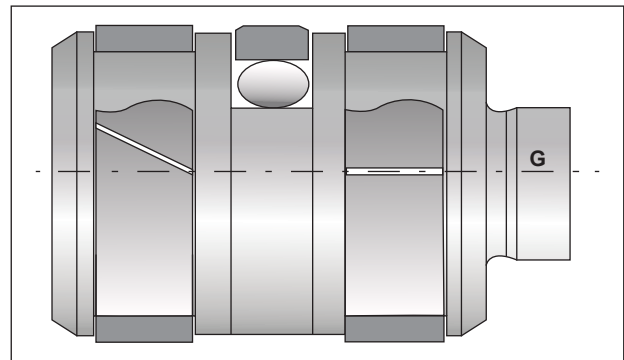

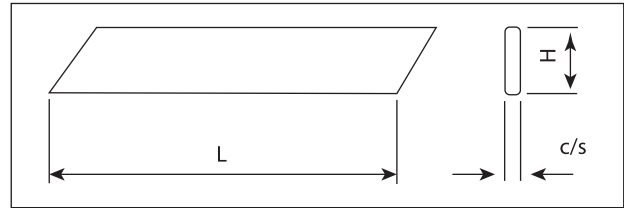

Guide strips are delivered in length form and can be cut to length to suit your requirements. The length not only calculated depending on the rod/bore diameter but also considering the thermal expansion in the guide ring while operation. also accounts for the gap 'G' necessary at the ends of the strip after fitting. These gap 'G' offsets the thermal expansion under the effects of temperature and prevents intermediate pressure and dry pressure in the system. The length of the wear ring can be calculated by using the following formula:

Rod application : $L(\text{mm}) = \pi \times (\text{Ø}D - c/s) - G$

Piston application : $L(\text{mm}) = \pi \times (\text{Ø}d + c/s) - G$

where

- L = Length of wear strip (mm)
- D = Piston diameter (mm)
- d = Rod diameter (mm)
- c/s = cross section/thickness of the wear strip
- G = Required gap after fitting
- H = Height of guide strip

Material

For Calculating the required bearing material strength, it is important for determining the correct material to use. Below are criteria that need to be considered:

- The application whether rotary, reciprocating, or static.
- Surface speed.
- Lubrication.
- Temperature.
- Shaft / Bore material, hardness, and surface finish.

As per the different specific demands, guide strips, piston and rod guides are available in various materials.

DETAILS

The GS wear ring is supplied usually in split form. The split is oblique for Reciprocating / Oscillating application & straight for rotary movement applications. The GS wear ring is the most widely used general-purpose wear rings in light-duty applications and particularly for small diameters where the flexibility of the strip makes installation into a groove easier. The material used is PTFE with a Bronze content of 40%. For further improvement in performance, a Bronze content of 60% can be available on request. The GS wear ring can be cut to length to suit your specific requirements. Length not only calculated depending on the Rod/Cylinder bore diameter, but also considering thermal expansion in the GS wear ring in operation. The low friction PTFE material reduces 'stick-slip' between moving parts.

COMPATIBILITY

Hydraulic mineral oil, lubricating oil, water based soluble & water glycol fluids, synthetic fire-resistant fluids, and lubricating grease.

APPLICATION

Hydraulic and pneumatic cylinders pumps, compressors, chemical and process industries.

FEATURES

- Stick-slip free.
- Suitable for non-lubricating fluids.
- Minimum static and dynamic friction coefficient for low operating temperature and energy loss.
- Outstanding lubrication.
- High wear resistance.
- Long service life.
- Suitable for new environmentally friendly hydraulic fluids.
- The embedding of foreign particles is enhanced.
- Good damping effect absorbs vibrations.

DETAILS

B01 consists of a metal washer with a rectangular cross-section and an elastomer sealing lip with a trapezoidal cross-section that is vulcanized to the inside. When a bolt is tightened, the metal ring resists the bursting forces and limits the deformation of the elastomer sealing ring. Under such a state, the elastomer sealing ring not only has a preload pressure on the mating surface higher than the pressure being sealed but also forms the profile of a U-ring to withstand higher pressures.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- General purpose seal.
- High pressure resistance applications.

FEATURES

- Simple, captive assembly.
- Reliable low- and high-pressure sealing.
- Secure sealing.
- Metal Back-up.
- Cost effective solution for bolt/thread sealing.
- Standard dimensions.

NOTE

Note: B01 Imperial, B01 Cetops (ISO 1179-1973), B01 German, B01 French & B01 Metric sizes are available.

DETAILS

B02 Bonded seals are designed with an additional rubber lip than B01 type, making them self-centering. B02 has developed to eliminate the occurrence of leakage due to seal offset, the self-centering type bonded seal has the additional benefit of pre-assembling on to threads with the consequent production line savings. The thin seal membrane offers little resistance during assembly.

COMPATIBILITY

Mineral oils, bio oils, water soluble & water glycol fluids.

APPLICATION

- General purpose seal.
- High pressure resistance applications.

FEATURES

- Simple, captive assembly.
- Ability to pre-assemble.
- Concentrically located.
- Reliable low- and high-pressure sealing.
- Secure sealing.
- Metal Back-up.
- Cost effective solution for bolt/thread sealing.
- Standard dimensions.
