ROUND V-BELTS

Max Spare has added its new range of Polyurethane Round & V Belt manufacturing and thus offers its customers a wide range in this segment. The added advantage of PU Round and V Belt is offers in endless from (Jointless) upto 1mtr. dia.

Round Belts: PU Round belts are available in 90° shore A hardness with rough / smooth from Diameter 2 mm to 16 mm.

V Belts: PU V-Belts are available in sections like M, Z, A, B, C, D, E and some special sections.

Applications :

Ceramic Tiles & Roof Tiles, Paper & Printing Industry, Woodworking Machines, Packaging Machines, Garment Industries, Roller Conveyors, Can Conveyors, Textile Industry, Glass Industry, Food Industry, Canneries

PU Round Belt (Smooth Surface)

BELT TOOLS

MAXSPARE V-BELT TENSION TESTER

Proper belt tension is vital to the operation of the drive and the life of the belts. To ensure optimum V-belt drive operation, it is recommended to check the tension in the belt with the help of tension measuring device.

MAXSPARE PULLEY GAUGES

Maxspare Pulley Gauges are designed for checking profiles of the grooves of various conventional and dual section pulleys. Identify the pulley gauge to be used according to section and its diameter.

ANGLE GAUGE

Angle Gauge is a simple tool to determine the section of a V-Belt. If the belt marking or labelling is not visible belt would be inserted on Angle Gauge for deciding the exact belt profile and size.

BELT TOOL KIT

Consisting of pulley gauge, tension tester, measuring tape, angle gauge and Belt guide.

INSTALLATION & MAINTENANCE CHART

Comprises of maintenance tips which helps in maintaining healthy condition of the drive.

	Inspect the Pulley grooves for any scores, sharp edges, dirt and rust clean it and grease with a wire brush.		If any unusual sound coming from belt drive cover to cover, take immediate precaution for the same.
	Check if the pulley grooves & wear and damaged in operation from belt will not fit in the groove. Check the grooves with rubber gauge.		Always Lubricant bearings for good performance & long life.
	Ensure the alignment of Pulleys. Make sure that the Shafts are also properly aligned.		Proper run guard on belt drive is required.
	In an emergency do not mix old and new belts on a drive. Running them together will damage the new belt and cannot carry its share of the load.		If inside of the belt has cracks, change the belt immediately. Use proper cutters and die to prevent cracks. Replacement of belt are fixed to correct.
	To install the new belts switch off the Machine and follow the installation procedure.		Do not use belts dressing. If the belt slips tighten and/or check for worn sheave groove.
	Do not fix or force belts on the sheaves. This can break the load carrying tensile member of the belts and the belts will break or turn over shortly after installation.		For severe vibration stop the drive immediately & check thoroughly.
	Time to time check the Pulley for dirt and rust for best performance.		In high temperature if the belt is short span use "TRAS" belts.
	Check belt tension time to time.		When both Pulleys are not aligned properly or if their grooves are unbalanced, there is a possibility of belt turn over.
	Always keep an watch the running time for avoiding any trouble.		A change in ride out indicates severe belt wear or worn sheave change belt, always with new set.
	Do not put any harmful Chemicals or Powder or Oil on running belts.		Ensure that no dirt or unusual particles are sticking in the grooves.

Introduction :

Max Spare introduces C.I. Couplings in its wide range of products. These couplings are stocks bore and used in different industries for light, medium & heavy duty electrical motor and internal combustive power transmission application. Please refer below dimensional table for more details.

Features :

- Easy and Fast Installation, Easy Alignment
- Best Quality cast iron body.
- Extra strength and durability
- Safety - Still perform if elastomer fails.
- Prevent metal to metal contact
- Most types available in stock within 24 hrs.

**Introduction :**

Max Spare Round Mounting facility easy installation of machines, arrest noise level and vibrations. Adjustable built-up guide helps precise levelling of the machine and keeps it static. Max Spare adjustable mounting are available in 11 models to suit different load bearing capacities. Please refer below dimensional table for more details.

Application :

Lathes, Milling, Shaping, Grinding Machines, Power & Hydraulic Presses, Notching Machines and Press Brakes, Diesel Gensets, Rolling Mills etc.

Introduction :

Max Spare LM Series light duty round mountings are used for light and medium duty machine foots. Easy to install machines without heavy concrete base thus make easier to shift machine and re-install.

Features :

- This isolates the vibration and shock of the machine from the floor
- This can also reduce the influence of other machines
- Oil resist rubber element.
- Machines are stationary on the floor without anchors

Application :

These mounts are suitable for Light duty industries, textiles, food processing units and Metal cutting machines.

DEPTH CALIPER

5 Easy steps to groove measurement -

- 1) Choose the suitable pin to put in the upper of the lower hole.
- 2) Push the pin to reset the graduation to zero.
- 3) Down to gland hole to measure the depth of groove.
- 4) Measure the order side of the pin.
- 5) Depth = Length of pin - measurement.

O-RING HOOK

Removing 'O' Rings from the seal with steel implements poses the real danger of damaging the 'O' Ring seat. With Max Spare 'O' Ring Hooks the removal of 'O' rings is simple, and safe. The 'O' Ring hooks come in a set of 4, with different profiles. The design of the hooks is such that it does not damage the seat. Knurled handle provides firm grip.

SEAL TWISTOR

SIZE RANGE

SPECIFICATION	S		M		L		XL	
Ø GLAND HOLE	22 to 30mm	0.7" to 1.187"	30 to 50mm	1.187" to 2"	50 to 70mm	2" to 2.75"	70 to 165mm	2.75" to 6.5"
Cross Section Max.	5mm	0.187"	6mm	0.234"	10mm	0.375"	17.5mm	0.187"

5 Easy steps to install Rod Seals with Seal Twistor:

Fix the handle in the stand hole. Then put two arms inside the seal.

Twist the seal with guiding hand to prevent it from popping out.

Hold the handles, then put the seal into the gland hold carefully.

Turn handles back, then pull TWISTOR out to rebound the seal in the groove.

PISTON SEAL CONSTRICTOR

Step 1

Prepare a twist bar and adapter as shown in the figure. Set the twist bar and adapter as shown. Then set the Teflon ring in the center of the band.

Step 2

Hold for 10 seconds or more.

Step 3

Installation is completed by the above steps. The internal and external circumstances faces of the Teflon ring affect sealing performance. So be careful to scratch the ring.

LUBRICANTS

Max Multipurpose Grease :

Max Grease is premium quality modified lithium based multipurpose grease, used in anti-friction bearing of heavy duty wheel, bearing of road transport vehicles, axel boxes of diesel / electric locomotive, roller bearing, construction machinery cranes, blowers and electrical motors.

Max Spare Grease provides excellent thermal and shared stability in operating temperature up to 150°C. It also gives very good performance in terms of water resistance property. High mechanical and chemical stability ensuring that grease remains unaltered when exposed to loads and thermal stresses. It meets the requirement of NLGI3.

Max-O-Lube

- Can be used in both High Pressure and Vacuum Systems.
- Non-toxic and non-irritating.
- Suitable for temperature range of -40° C to +225° C
- Can be used with a variety of fluid media as it is inert.

Max 40 Multifunctional Fluid

A multi-functional fluid, MAX-40 is versatile. Precision-penetrating and lubricating product that breaks through rust and corrosion displaces water and cleans scale and dirt. The added Dry Lubricant improves lubrication and retains it over an extended period of time.

Max-40 can be used in all working environments, for electrical parts, automotive assemblies, vehicle/aircraft maintenance, office/home machines, leisure and sporting equipment, workshops, factories and a lot more.

IR THERMOMETER

IR thermometer is a device instantly measures temperature from a distance without contact with the object to be measured.

Features:

- » °C or °F Selection
- » Laser Target Pointer Selection
- » Automatic Data Hold Function
- » Auto Power Off
- » Adjustable Emissivity

Technical Data:

CONTACT TACHOMETER - Model: DT-2235B

DT-2235 is Contact type Tachometer to measure the RPM.

Product Details:

Model	DT-2235B
Range	0.5 to 19,999 RPM
Surface Speed	0.05 to 1,999.9 m/min. (0.2 to 6,560 ft/min)
Resolution	RPM 0.1 RPM < 1,000 1 RPM 1,000 RPM
Display	5 digits, 10 mm (0.4") LCD.
Sampling Time	1 second (6 RPM)
Circuit	Exclusive one-chip of micro LSI circuit.
Battery	1.5 V AA (UM-3) battery x 4 PCs.
Operating Temp	0 to 50 ? (32 to 122 ?)
Memory	Last value, Max. value, Min. value.
Size	208 x 72 x 37 mm (8.2 x 2.8 x 1.5 inch).
Weight	280g (0.62 LB)/including battery.

SEAL MAINTENANCE TOOL BOX

Max Spare offers, Seal Maintenance Tool Box easy for seal installations, removal or checking purpose accessories.

CIRCUMETER

Circumeter (Pi Tape) is very useful for accurate measurement for flexible rubber item such as O-Rings. Max Spare offer 3 ranges of Pi tape which covers diameter from 50 mm to 1400 mm.

Size Range
50 - 300 mm
100 - 700 mm
200 - 1400 mm

Note: Order your require size Pi tape on www.maxspare.com

FELT SHEET

Standard Sheets

Preformed Customised Shapes

Max Spare offers Felt Sheets used in different industrial application such as packing, padding, cushioning, wiping, wicking, lubricating, sealing etc. These sheets are available in various sizes and thickness. Also can be supplied in Ring form or Customised preformed shape and strips.

BRAIDED PACKING

PTFE Packing

PTFE Packing

Graphite Packing

PTFE / Graphite Packing

Max Spare offers compression gland packings which are designed and constructed using latest design technology and the most advanced processes with the highest quality braiding methods. Max Spare packings offers superior sealing performance, long packing life and the ability to be used in wide range of applications. These Packings are cost effective and have the ability to replace any leading manufactures in the market.

Our range in this Gland Packings are

1. Pure PTFE Packing
2. Pure Flexible Expanded Graphite Packing

Pure PTFE Packings :

Pure PTFE Packings is square braided packing constructed from PTFE yarns and impregnated with PTFE dispersion and further heavily lubricated and saturated with an inert lubricant. It is suitable for Food, Pharmaceutical and Chemical industries.

Pure Flexible Expanded Graphite Packing :

Pure Flexible Expanded Non-Metallic Graphite Packing is constructed from pure expanded graphite yarn with excellent carbon content. Being pure graphite, they have excellent chemical resistance, and can be used in extreme temperature and pressure conditions. It is suitable for sealing critical applications in valves and pumps Industries.

STORAGE OF SEALS

Storage Conditions:

Most polymers, including vulcanized rubber and other elastomers, tend to change their properties during storage and may become unusable. This may be due to hardening, softening, cracking or other deterioration and may result from exposure to oxygen, ozone, light, heat and / or moisture.

The following recommendations indicate the most suitable storage conditions for elastomeric products, whether it is a single item or a composite product.

- Temperature** - Storage temperatures should not exceed 50°C (122°F). However, ideal storage temperature should be 25°C (77°F). Low temperatures are not permanently harmful provided the rubber items are handled carefully and not distorted. When taken from low temperatures items should be raised to approximately 30°C (86°F) before they are used.
- Humidity** – Relative humidity is of 40% to 70% in a draft-free atmosphere.
- Light** – The products should be protected from direct sunlight, ultraviolet and artificial light have a high UV content.
- Oxygen and Ozone** - Wrapping, storage in airtight containers or other suitable means should be used for vulcanised rubber items. Storage in containers that limit exposure to environmental conditions (e.g. sealed plastic bags) should be used for all materials.
- Radiation** – Products should be protected from all sources of ionizing radiation.
- Deformation** – The rubber items should be stored in a relaxed position, without tension or compression. Laying the product on a flat surface and preventing its suspension or crushing keeps it from deforming and minimizes deformation.
- Contact with liquid or semi-liquid materials** – Rubber should not come in to contact with liquid or semi-liquid materials or their vapours at any time during storage, unless these materials are an integral part of the product or the manufacture's packaging.
- Contact with Metals** - Metals such as manganese, iron and copper, or copper alloys can have a harmful effect on rubber. A layer of paper, polyethylene or cellophane will keep these separated.
- Contact with Non-Metals** - Contact with other rubbers should be avoided.
- Stock Rotation** - Elastomers should be stored for as short a period as possible, and practice the First In First Out (FIFO system) stock liquidation.
- Cleaning** - Organic solvents such as trichloroethylene, carbon tetrachloride and petroleum are the most harmful agents. Soap and water and methylated spirits are the least harmful, and all parts should be dried at room temperature before use.
- Shelf Life** - The table shows the storage life of seal components made from the more common materials under ideal conditions. Storing under less than ideal conditions will reduce the life of the component.

Careful inspection for the following should be made before installation after storage:

- Cracks or Surface crazing
- Mechanical damage
- Permanent distortion
- Surface softening or hardening
